modular chilled water air conditioning systems

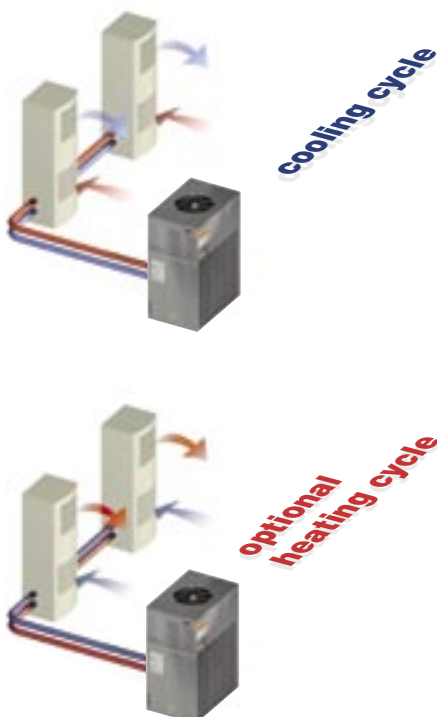

### Crestair Systems

The temporary climate control system which thinks its an installed one. Modular chilled water air conditioning systems for comfort cooling and cooling in server & computer rooms, or enclosed areas containing heat sensitive equipment.

**Crestair** is a temporary air conditioning system designed to control ambient temperatures in heavily populated offices and in rooms and areas containing heat sensitive equipment. It can be installed when weather conditions threaten to overwhelm the installed system, when the installed system has failed or has to be shut down for maintenance. It is also the ideal solution for air conditioning temporary structures.

**Crestair** temporary cooling systems comprise specially engineered Coolmation water chillers and stylish indoor chilled water fan coils, as many as required to meet the cooling load. The system is rapidly interconnected with high pressure hose and leak free quick connect couplings. When required, reverse cycle chillers can be installed to provide both heating and cooling.

air conditioning systems

## Features - Water Chillers

- \* A range of chillers from 9kW capacity to 350kW.
- \* Reverse cycle cooling and heating units available
- \* 9kW chillers operate from a standard 13A supply
- \* For speed and ease of installation, chillers have integral circulating pumps and buffer tanks

## Features - Fan Coils

- \* 15kW cooling capacity from a 13A socket
- \* Compact and easily located
- \* Stylish, blend perfectly with office décor
- \* Quiet operation for minimal disturbance
- \* Fan speed control to adjust air volumes
- \* Controlled on room temperature
- \* Integral pump to dispose of condensate
- \* Measures just - W540mm x D370mm x H2300mm

## Features - Installed System

- \* Cooling capacities from 9kW to many hundreds
- \* No refrigerants in the air conditioned space
- \* Operates exactly like an installed system
- \* Indoor system components operate from a 13A supply
- \* Rapidly installed, most within 24hours
- \* 24/7 technical and field support
- \* Optional 24 hour remote monitoring

Crestair fan coils use little floor space whilst achieving high volumes of airconditioning

A Crestair system maintaining safe working temperatures in a server room
